COVID-19 Contact Tracing

If you are found to be a close contact and at risk of COVID-19, the Southeast Utah Health Department will contact you directly. They will identify themselves and indicate how they received the information.

A close contact to an infected person is:
- Someone within their household
- Someone who has been within 6 feet, for a prolonged period of time.

All close contacts are to self-isolate and are monitored for 14 days. Any that show COVID-19 symptoms are tested for the virus.

The contact tracing process repeats with each new patient who is found, until there are no new patients.

If no symptoms show after 14 days, the contact is not at risk of developing COVID-19.
